PROPOSED PART 70 OPERATING PERMIT 2869-V3

**NORCO FACILITY
C-UNIT, CaCl_2 UNIT, AND ECH FINISHING SYSTEM
HEXION SPECIALTY CHEMICALS INC.
NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003**

I. APPLICANT

The applicant is: Hexion Specialty Chemicals, Inc.
P.O. Box 10
Norco, LA 70079

Facility: Norco Facility – C-Unit, CaCl_2 Unit, and ECH Finishing System

SIC Code: 2819, 2821, 2869

Location: 16122 River Road
Norco, LA 70079

II. PERMITTING AUTHORITY

The permitting authority is: Louisiana Department of Environmental Quality
Office of Environmental Services
P.O. Box 4313
Baton Rouge, Louisiana 70821-4313

III. CONTACT INFORMATION

Additional information may be obtained from:

Mr. Corbet Mathis
P.O. Box 4313
Baton Rouge, Louisiana 70821-4313
Phone: (225) 219-3181

IV. FACILITY BACKGROUND AND CURRENT PERMIT STATUS

Hexion Specialty Chemicals, Inc. (HSC) operates the Crude Epichlorohydrin Unit (C-Unit), the Calcium Chloride (CaCl_2) Unit, and the ECH Finishing System under Part 70

¹ 40 CFR 70.7(a)(5) and LAC 33:III.531.A.4 require the permitting authority to "provide a statement that sets forth the legal and factual basis for the proposed permit conditions of any permit issued to a Part 70 source, including references to the applicable statutory or regulatory provisions."

STATEMENT OF BASIS

**NORCO FACILITY
C-UNIT, CaCl₂ UNIT, AND ECH FINISHING SYSTEM
HEXION SPECIALTY CHEMICALS INC.
NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003
Proposed Permit No. 2869-V3**

Permit No. 2869-V2 dated April 3, 2006. These units were previously owned and operated by Shell Chemical LP.

The C-Unit, CaCl₂ Unit, and ECH Finishing System are presently operating under Permit No. 2869-V2, issued April 3, 2006.

This permit addresses all emission units at the C-Unit, CaCl₂ Unit, and ECH Finishing System.

A number of Part 70 permits addressing other process units at the Norco Facility have already been issued. These include:

Permit No.	Process Unit	Date Issued
2869-V2	C-Unit, CaCl ₂ , ECH Finishing	04/03/2006
2586-V1	High Performance Resins Unit	12/20/2006
2252-V2	Organic Chloride Liquid Waste Incinerators	03/06/2009 (Amended 09/16/2009)
2914-V0	Utilities Unit	03/10/2005
2764-V2	Flare	08/16/2008 (Amended 10/06/2008)

V. PROPOSED PERMIT/PROJECT INFORMATION

Hexion Specialty Chemicals submitted an application and Emission Inventory Questionnaire (EIQ) dated September 18, 2008, requesting a Part 70 permit renewal for the C-Unit, CaCl₂ Unit, and ECH Finishing System.

Process Description

The Hexion Specialty Chemical, Norco Facility consists of several units that operate under existing permits. This permit addresses the Crude Epichlorohydrin Unit (C-Unit), Calcium Chloride (CaCl₂) Unit, and ECH Finishing System. Additionally, this permit includes the Chlorine Adsorption System and Hydrogen Chloride loading operations.

C-Unit:

The C-Unit produces Allyl Chloride, Crude Epichlorohydrin (ECH), and approximately 36.5% Hydrochloric Acid solution. The primary raw materials used in the C-unit are propylene, chlorine and lime. Propylene is reacted with chlorine to form allyl chloride. The

STATEMENT OF BASIS

NORCO FACILITY C-UNIT, CaCl₂ UNIT, AND ECH FINISHING SYSTEM HEXION SPECIALTY CHEMICALS INC. NORCO, ST. CHARLES PARISH, LOUISIANA Agency Interest (AI) No. 87883 Activity No. PER20080003 Proposed Permit No. 2869-V3

allyl chloride water and chlorine are fed to several recirculation loop reactors, where an aqueous dichlorohydrin solution is formed. The dichlorohydrin stream is then routed to the ECH Stripper Column where it is contacted with lime producing crude ECH.

CaCl₂ Unit:

The CaCl₂ Unit produces calcium chloride slurry by reacting HCl solution produced in the C-Unit with limestone. The resulting CaCl₂ solution is sold as product. This unit was upgraded under Permit No.2869-V1 dated May 20, 2005.

ECH Finishing System:

The ECH Finishing System and a tank truck loading rack at the Norco Facility provides a more efficient manufacturing process.

Proposed Modifications

Hexion proposes to renew the Part 70 permit and reconcile the requirement section with updated requirements. No physical modifications or changes in operation are being proposed at this time.

VI. ATTAINMENT STATUS OF PARISH

<u>Pollutant</u>	<u>Attainment Status</u>	<u>Designation</u>
PM _{2.5}	Attainment	N/A
PM ₁₀	Attainment	N/A
SO ₂	Attainment	N/A
NO ₂	Attainment	N/A
CO	Attainment	N/A
Ozone ²	Attainment	N/A
Lead	Attainment	N/A

² VOC and NO_x are regulated as surrogates.

STATEMENT OF BASIS

NORCO FACILITY **C-UNIT, CACL₂ UNIT, AND ECH FINISHING SYSTEM** **HEXION SPECIALTY CHEMICALS INC.** **NORCO, ST. CHARLES PARISH, LOUISIANA** **Agency Interest (AI) No. 87883** **Activity No. PER20080003** **Proposed Permit No. 2869-V3**

VII. PERMITTED AIR EMISSIONS

Sources of air emissions are listed on the "Inventories" page of the proposed permit.

Estimated emissions of criteria pollutants from the facility, in tons per year (TPY), are as follows:

<u>Pollutant</u>	<u>Before</u>	<u>After</u>	<u>Change</u>
PM ₁₀	23.80	23.81	+0.01
SO ₂	0.03	0.03	-
NO _x	4.09	4.09	-
CO	3.44	3.44	-
VOC*	121.40	121.41	+0.01

PM₁₀ and VOC compounds classified as LAC 33:III.Chapter 51-regulated toxic air pollutants (TAP) are speciated below. This list encompasses all Hazardous Air Pollutants (HAP) regulated pursuant to Section 112 of the Clean Air Act. Note, however, all TAPs are not HAPs (e.g., ammonia, hydrogen sulfide).

<u>Pollutant</u>	<u>Before</u>	<u>After</u>	<u>Change</u>
1,2-Dichloropropane	0.44	0.37	-0.07
1,3-Dichloropropene	0.66	0.66	-
Acrolein	0.53	0.533	+0.003
Allyl chloride	13.28	13.296	+0.016
Benzene	0.004	0.004	-
Epichlorohydrin	29.94	29.94	-
Ethyl benzene	0.01	<0.001	-0.01
Propylene oxide	0.07	0.07	-
Toluene	1.71	1.712	+0.002

STATEMENT OF BASIS

**NORCO FACILITY
C-UNIT, CACL₂ UNIT, AND ECH FINISHING SYSTEM
HEXION SPECIALTY CHEMICALS INC.
NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003
Proposed Permit No. 2869-V3**

<u>Pollutant</u>	<u>Before</u>	<u>After</u>	<u>Change</u>
Xylenes	0.01	0.001	-0.009
n-Hexane	0.002	0.002	-
Total TAPs	46.656	46.588	-0.068
Other VOC	74.744	74.822	+0.078

NON-VOC LAC 33:III Chapter 51 Toxic Air Pollutants (TAPs):

<u>Pollutant</u>	<u>Before</u>	<u>After</u>	<u>Change</u>
Chlorine	2.96	2.97	+0.01
Hydrochloric acid	6.14	6.133	-0.007
Total Non-VOC TAPs	9.10	9.103	+0.003

The Norco Facility is a major source of criteria pollutants, a major source of HAPs, and a major source of TAPs.

Permitted limits for individual emissions units and groups of emissions units, if applicable, are set forth in the tables of the proposed permit entitled "Emission Rates for Criteria Pollutants" and "Emission Rates for TAP/HAP & Other Pollutants." These tables are part of the permit.

Emissions calculations can be found in Appendix B of the permit application. The calculations address the manufacturer's specifications, fuel composition (e.g., sulfur content), emissions factors, and other assumptions on which the emissions limitations are based and have been reviewed by the permit writer for accuracy.

General Condition XVII Activities

Very small emissions to the air resulting from routine operations that are predictable, expected, periodic, and quantifiable and that are submitted by the applicant and approved by the Air Permits Division are considered authorized discharges. These releases are not included in the permit totals because they are small and will have an insignificant impact on air quality. However, such emissions are considered when determining the facility's potential to emit for evaluation of applicable requirements. Approved General Condition XVII activities are noted in Section VIII of the proposed permit.

STATEMENT OF BASIS

**NORCO FACILITY
C-UNIT, CACL₂ UNIT, AND ECH FINISHING SYSTEM
HEXION SPECIALTY CHEMICALS INC.
NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003
Proposed Permit No. 2869-V3**

Insignificant Activities

The emissions units or activities listed in Section IX of the proposed permit have been classified as insignificant pursuant to LAC 33:III.501.B.5. By such listing, the LDEQ exempts these sources or types of sources from the requirement to obtain a permit under LAC 33:III.Chapter 5. However, such emissions are considered when determining the facility's potential to emit for evaluation of applicable requirements.

VIII. REGULATORY APPLICABILITY

Regulatory applicability is discussed in three sections of the proposed permit: Section X (Table 1), Section XI (Table 2), and Specific Requirements. Each is discussed in more detail below.

Section X (Table 1): Applicable Louisiana and Federal Air Quality Requirements

Section X (Table 1) summarizes all applicable federal and state regulations. In the matrix, a "1" represents a regulation applies to the emissions unit. A "1" is also used if the emissions unit is exempt from the emissions standards or control requirements of the regulation, but monitoring, recordkeeping, and/or reporting requirements apply.

A "2" is used to note that the regulation has requirements that would apply to the emissions unit, but the unit is exempt from these requirements due to meeting a specific criterion, such as it has not been constructed, modified, or reconstructed since the regulation has been effective. If the specific criterion changes, the emissions unit will have to comply at a future date. Each "2" entry is explained in Section XI (Table 2).

A "3" signifies that the regulation applies to this general type of source (e.g., furnace, distillation column, boiler, fugitive emissions, etc.), but does not apply to the particular emissions unit. Each "3" entry is explained in Section XI (Table 2).

If blank, the regulation clearly does not apply to this type of emissions unit.

Section XI (Table 2): Explanation for Exemption Status or Non-Applicability of a Source

Section XI (Table 2) of the proposed permit provides explanation for either the exemption status or non-applicability of given federal or state regulation cited by 2 or 3 in the matrix presented in Section X (Table 1).

Specific Requirements

Applicable regulations, as well as any additional monitoring, recordkeeping, and reporting requirements necessary to demonstrate compliance with both the federal and state terms and conditions of the proposed permit, are provided in the "Specific

STATEMENT OF BASIS

**NORCO FACILITY

Proposed Permit No. 2869-V3**

Requirements” section. Any operating limitations (e.g., on hours of operation or throughput) are also set forth in this section. Associated with each Specific Requirement is a citation of the federal or state regulation upon which the authority to include that Specific Requirement is based.

1. Federal Regulations

40 CFR 60 – New Source Performance Standards (NSPS)

The following subparts are applicable at the C-Unit, CaCl_2 Unit, and ECH Finishing System: VV and NNN. Applicable emission standards, monitoring, test methods and procedures, recordkeeping, and reporting requirements are summarized in the “Specific Requirements” section of the proposed permit.

40 CFR 61 – National Emission Standards for Hazardous Air Pollutants (NESHAP)

The following subparts are applicable at the C-Unit, CaCl_2 Unit, and ECH Finishing System: M and FF. Applicable emission standards, monitoring, test methods and procedures, recordkeeping, and reporting requirements are summarized in the “Specific Requirements” section of the proposed permit.

40 CFR 63 – Maximum Achievable Control Technology (MACT)

The following subparts are applicable at the C-Unit, CaCl_2 Unit, and ECH Finishing System: F, G, H, and NNNNN. Applicable emission standards, monitoring, test methods and procedures, recordkeeping, and reporting requirements are summarized in the “Specific Requirements” section of the proposed permit.

Clean Air Act §112(g) or §112(j) – Case-By-Case MACT Determinations

A case-by-case MACT determination pursuant to §112(g) or §112(j) of the Clean Air Act was not required.

40 CFR 64 – Compliance Assurance Monitoring (CAM)

Per 40 CFR 64.2(a), CAM applies to each pollutant-specific emissions unit (PSEU) that 1) is subject to an emission limitation or standard, 2) uses a control devices to achieve compliance, and 3) has potential pre-control device emissions that are equal to or greater than 100 percent of the amount, in TPY, required for a source to be classified as a major source.

The C-Unit, CaCl_2 Unit, and ECH Finishing System does not contain any PSEU’s with active controls.

HEXION SPECIALTY CHEMICALS INC.
NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003
Proposed Permit No. 2869-V3**

Acid Rain Program

The Acid Rain Program, 40 CFR Part 72 – 78, applies to the fossil fuel-fired combustion devices listed in Tables 1-3 of 40 CFR 73.10 and other utility units, unless a unit is determined not to be an affected unit pursuant to 40 CFR 72.6(b). LDEQ has incorporated the Acid Rain Program by reference at LAC 33:III.505. The C-Unit, CaCl₂ Unit, and ECH Finishing System is not subject to the Acid Rain Program.

2. SIP-Approved State Regulations

Applicable state regulations are also noted in Section X (Table 1) of the proposed permit. Some state regulations have been approved by the U.S. Environmental Protection Agency (EPA) as part of Louisiana's State Implementation Plan (SIP). These regulations are referred to as "SIP-approved" and are enforceable by both LDEQ and EPA. All LAC 33:III.501.C.6 citations are federally enforceable unless otherwise noted.

3. State-Only Regulations

Individual chapters or sections of LAC 33:III noted by an asterisk in Section X (Table 1) are designated "state-only" pursuant to 40 CFR 70.6(b)(2). Terms and conditions of the proposed permit citing these chapters or sections are not SIP-approved and are not subject to the requirements of 40 CFR Part 70. These terms and conditions are enforceable by LDEQ, but not EPA. All conditions not designated as "state-only" are presumed to be federally enforceable.

State MACT (LAC 33:III.Chapter 51)

The Norco Facility is a major source of LAC 33:III.Chapter 51 regulated TAP. The owner or operator of any major source that emits or is permitted to emit a Class I or Class II TAP at a rate equal to or greater than the Minimum Emission Rate (MER) listed for that pollutant in LAC 33:III.5112 shall control emissions of that TAP to a degree that constitutes Maximum Achievable Control Technology (MACT), except that compliance with an applicable federal standard promulgated by the U.S. EPA in 40 CFR Part 63 shall constitute compliance with MACT for emissions of toxic air pollutants. Applicable Part 63 standards are addressed in Section VIII.1 of this Statement of Basis. MACT is not required for Class III TAPs; however, the impact of all TAP emissions must be below their respective Ambient Air Standards (AAS).

MACT determinations were made pursuant to Chapter 51 for the following emissions units: 102, 103, 111, 193, 210, 216, 229-A, 229-B, C-C205, 119, 110, 218, 228, and 232. State MACT requirements are cited as LAC 33:III.5109.A in the proposed permit.

STATEMENT OF BASIS

NORCO FACILITY C-UNIT, CaCl_2 UNIT, AND ECH FINISHING SYSTEM HEXION SPECIALTY CHEMICALS INC. NORCO, ST. CHARLES PARISH, LOUISIANA Agency Interest (AI) No. 87883 Activity No. PER20080003 Proposed Permit No. 2869-V3

IX. NEW SOURCE REVIEW (NSR)

1. Prevention of Significant Deterioration (PSD)

The facility's source category is listed in Table A of the definition of "major stationary source" in LAC 33:III.509. As such, the PSD major source threshold is 100 TPY (of any regulated NSR pollutant).

C-Unit, CaCl_2 Unit, and ECH Finishing System is a major stationary source under the PSD program, LAC 33:III.509. However, there are no physical changes or changes in the method of operation associated with this permit modification.

2. Nonattainment New Source Review (NNSR)

The Norco Facility is located in an attainment area; therefore, NNSR does not apply.

3. Notification of Federal Land Manager

The Federal Land Manager (FLM) is responsible for evaluating a facility's projected impact on the Air Quality Related Values (AQRV) (e.g., visibility, sulfur and nitrogen deposition, any special considerations concerning sensitive resources, etc.³) and recommending that LDEQ either approve or disapprove the facility's permit application based on anticipated impacts. The FLM also may suggest changes or conditions on a permit. However, LDEQ makes the final decision on permit issuance. The FLM also advises reviewing agencies and permit applicants about other FLM concerns, identifies AQRV and assessment parameters for permit applicants, and makes ambient monitoring recommendations.

PSD and NNSR do not apply so Notification of the Federal Land Manager is not required.

4. Reasonable Possibility

There are not projects that are associated with this renewal and modification.

X. ADDITIONAL MONITORING AND TESTING REQUIREMENTS

In addition to the monitoring and testing requirements set forth by applicable state and federal regulations (see Section VIII of this Statement of Basis), a number of "LAC 33:III.507.H.1.a" and/or "LAC 33:III.501.C.6" conditions may appear in the "Specific

NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003
Proposed Permit No. 2869-V3**

Requirements” section of the proposed permit. These conditions have been added where no applicable regulation exists or where an applicable regulation does not contain sufficient monitoring, recordkeeping, and/or reporting provisions to ensure compliance. LAC 33:III.507.H.1.a provisions, which may include recordkeeping requirements, are intended to fulfill Part 70 periodic monitoring obligations under 40 CFR 70.6(a)(3)(i)(B).

XI. OPERATIONAL FLEXIBILITY

Emissions Caps

An emissions cap is a permitting mechanism to limit allowable emissions of two or more emissions units below their collective potential to emit (PTE). The proposed permit does establish an emissions cap. Emissions of Chlorine from the Cl Absorber vents are capped. Hexion must calculate emissions of chlorine based on throughput to maintain compliance with the cap. Also, HCl Loading Throughput is capped for the HCl Loading Scrubbers. Hexion must monitor throughput to maintain compliance with the cap.

Alternative Operating Scenarios

LAC 33:III.507.G.5 allows the owner or operator to operate under any operating scenario incorporated in the permit. Any reasonably anticipated alternative operating scenarios may be identified by the owner or operator through a permit application and included in the permit. The proposed permit does not include an alternative operating scenario.

Streamlined Requirements

When applicable requirements overlap or conflict, the permitting authority may choose to include in the permit the requirement that is determined to be most stringent or protective as detailed in EPA’s “White Paper Number 2 for Improved Implementation of the Part 70 Operating Permits Program” (March 5, 1996). The overall objective is to determine the set of permit terms and conditions that will assure compliance with all applicable requirements for an emissions unit or group of emissions units so as to eliminate redundant or conflicting requirements. The proposed permit does contain streamlined provisions.

Louisiana Consolidated Fugitive Emission Program (LCFEP)

The C-Unit, CaCl_2 Unit, and ECH Finishing System complies with a streamlined equipment leak monitoring program.

Compliance with the streamlined program shall constitute compliance with each of the fugitive emission monitoring programs being streamlined. Fugitive emissions are subject to the requirements of 40 CFR 63 Subpart H, 40 CFR 60 Subpart VV, and LAC 33:III.2121. Among these regulations, 40 CFR 63 Subpart H establishes the most stringent leak

STATEMENT OF BASIS

EQT 21 216 Propylene Oxide Charging Operations			

XII. PERMIT SHIELD

A permit shield, as described in 40 CFR 70.6(f) and LAC 33:III.507.I, provides an “enforcement shield” which protects the facility from enforcement action for violations of applicable federal requirements. It is intended to protect the facility from liability for violations if the permit does not accurately reflect an applicable federal or federally enforceable requirement.

The proposed permit does not establish a permit shield.

XIII. IMPACTS ON AMBIENT AIR

Emissions associated with the proposed renewal/modification were reviewed by the Air Quality Assessment Division to ensure compliance with the NAAQS and AAS. LDEQ did not require the applicant to model emissions.

XIV. COMPLIANCE HISTORY AND CONSENT DECREES

The Norco Facility’s compliance history can be found in Section 1 of the permit application. It must be disclosed per LAC 33:III.517.E and 517.D.12, if applicable.

XV. REQUIREMENTS THAT HAVE BEEN SATISFIED

The following state and/or federal obligations have been satisfied and are therefore not included as Specific Requirements.

<u>Source ID</u>	<u>Citation</u>	<u>Description</u>
Unit	40 CFR 61 Subpart FF	Initial notification.

XVI. OTHER REQUIREMENTS

Executive Order No. BJ 2008-7 directs all state agencies to administer their regulatory practices, programs, contracts, grants, and all other functions vested in them in a manner consistent with Louisiana's Comprehensive Master Plan for a Sustainable Coast and public interest to the maximum extent possible. If a proposed facility or modification is located in the Coastal Zone, LDEQ requires the applicant to document whether or not a Coastal Use Permit is required, and if so, whether it has been obtained. Coastal Use Permits are issued by the Coastal Management Division of the Louisiana Department of Natural Resources (LDNR).

The facility is located in the Coastal Zone; however, a Coastal Use Permit is not required.

XVII. PUBLIC NOTICE/PUBLIC PARTICIPATION

Written comments, written requests for a public hearing, or written requests for notification of the final decision regarding this permit action may be submitted to:

Ms. Soumaya Ghosn
LDEQ, Public Participation Group
P.O. Box 4313
Baton Rouge, Louisiana 70821-4313

Written comments and/or written requests must be received prior to the deadline specified in the public notice. If LDEQ finds a significant degree of public interest, a public hearing will be held. All comments will be considered prior to a final permit decision.

LDEQ will send notification of the final permit decision to the applicant and to each person who has submitted written comments or a written request for notification of the

TSP	Total Suspended Particulate
µg/m ³	Micrograms per Cubic Meter
UTM	Universal Transverse Mercator
VOC	Volatile Organic Compound
VOL	Volatile Organic Liquid
VRU	Vapor Recovery Unit

STATEMENT OF BASIS

**NORCO FACILITY
C-UNIT, CACL₂ UNIT, AND ECH FINISHING SYSTEM
HEXION SPECIALTY CHEMICALS INC.
NORCO, ST. CHARLES PARISH, LOUISIANA
Agency Interest (AI) No. 87883
Activity No. PER20080003
Proposed Permit No. 2869-V3**

APPENDIX B – GLOSSARY

Best Available Control Technologies (BACT) – an emissions limitation (including a visible emission standard) based on the maximum degree of reduction for each pollutant subject to regulation under this Part (Part III) which would be emitted from any proposed major stationary source or major modification which the administrative authority, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of such pollutant.

CAM - Compliance Assurance Monitoring – A federal air regulation under 40 CFR Part 64.

Carbon Monoxide (CO) – (Carbon monoxide) a colorless, odorless gas produced by incomplete combustion of any carbonaceous (gasoline, natural gas, coal, oil, etc.) material.

Cooling Tower – A cooling system used in industry to cool hot water (by partial evaporation) before reusing it as a coolant.

Continuous Emission Monitoring System (CEMS) – The total combined equipment and systems required to continuously determine air contaminants and diluent gas concentrations and/or mass emission rate of a source effluent.

Cyclone – A control device that uses centrifugal force to separate particulate matter from the carrier gas stream.

Federally Enforceable Specific Condition – A federally enforceable specific condition written to limit the potential to Emit (PTE) of a source that is permanent, quantifiable, and practically enforceable. In order to meet these requirements, the draft permit containing the federally enforceable specific condition must be placed on public notice and include the following conditions:

- A clear statement of the operational limitation or condition which limits the source's potential to emit;
- Recordkeeping requirements related to the operational limitation or condition;
- A requirement that these records be made available for inspection by LDEQ personnel;
- A requirement to report for the previous calendar year.

Grandfathered Status – those facilities that were under actual construction or operation as of June 19, 1969, the signature date of the original Clean Air Act. These facilities are not required to obtain a permit. Facilities that are subject to Part 70 (Title V) requirements lose grandfathered status and must apply for a permit.

Proposed Permit No. 2869-V3**

APPENDIX B – GLOSSARY

Lowest Achievable Emission Rate (LAER) – for any source, the more stringent rate of emissions based on the following:

- a. the most stringent emissions limitation that is contained in the implementation plan of any state for such class or category of major stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or
- b. the most stringent emissions limitation that is achieved in practice by such class or category of stationary source. This limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within the stationary source. In no event shall the application of this term permit a proposed new or modified major stationary source to emit any pollutant in excess of the amount allowable under an applicable new source standard of performance.

NESHAP – National Emission Standards for Hazardous Air Pollutants – Air emission standards for specific types of facilities, as outlined in 40 CFR Parts 61 through 63.

Maximum Achievable Control Technology (MACT) – the maximum degree of reduction in emissions of each air pollutant subject to LAC 33:III.Chapter 51 (including a prohibition on such emissions, where achievable) that the administrative authority, upon review of submitted MACT compliance plans and other relevant information and taking into consideration the cost of achieving such emission reduction, as well as any non-air-quality health and environmental impacts and energy requirements, determines is achievable through application of measures, processes, methods, systems, or techniques.

NSPS – New Source Performance Standards – Air emission standards for specific types of facilities, as outlined in 40 CFR Part 60.

New Source Review (NSR) – a preconstruction review and permitting program applicable to new or modified major stationary sources of criteria air pollutants regulated under the Clean Air Act (CAA). NSR is required by Parts C (“Prevention of Significant Deterioration of Air Quality”) and D (“Nonattainment New Source Review”).

Nonattainment New Source Review (NNSR) – a New Source Review permitting program for major sources in geographic areas that do not meet the National Ambient Air Quality Standards (NAAQS) set forth at 40 CFR Part 50. NNSR is designed to ensure that emissions associated with new or modified sources will be regulated with the goal of improving ambient air quality.

Organic Compound – any compound of carbon and another element. Examples: methane (CH₄), ethane (C₂H₆), carbon disulfide (CS₂).

Part 70 Operating Permit – also referred to as a Title V permit, required for major sources as defined in 40 CFR 70 and LAC 33:III.507.

APPENDIX B – GLOSSARY

PM₁₀ – particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers as measured by the method in Title 40, Code of Federal Regulations, Part 50, Appendix J.

Potential to Emit (PTE) – the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design.

Prevention of Significant Deterioration (PSD) – a New Source Review permitting program for major sources in geographic areas that meet the National Ambient Air Quality Standards (NAAQS) at 40 CFR Part 50. PSD requirements are designed to ensure that the air quality in attainment areas will not degrade.

Selective Catalytic Reduction (SCR) – A non-combustion control technology that destroys NO_x by injecting a reducing agent (e.g., ammonia) into the flue gas that, in the presence of a catalyst (e.g., vanadium, titanium, or zeolite), converts NO_x into molecular nitrogen and water.

Sulfur Dioxide (SO₂) – An oxide of sulphur.

TAP – LDEQ acronym for toxic air pollutants regulated under LAC 33 Part III, Chapter 51, Tables 1 through 3.

"Top Down" Approach – An approach which requires use of the most stringent control technology found to be technically feasible and appropriate based on environmental, energy, economic, and cost impacts.

Title V permit – see Part 70 Operating Permit.

Volatile Organic Compound (VOC) – any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the Administrator of the U.S. Environmental Protection Agency designates as having negligible photochemical reactivity.
